

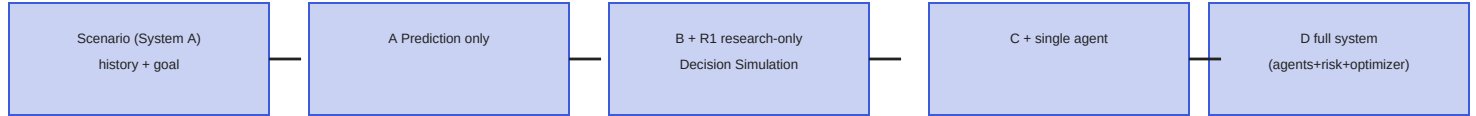

Figure 1 R1 evaluation architecture & information boundary

A/B/C/D may use: seeded history, goal, candidate set, and (B/C/D) the R1-DT elasticity ESTIMATED from that history.

None may use: true scenario elasticity, oracle action, objective value, future outcomes, test labels. Oracle uses full System-B ground truth (reference only).

Exogenous scorer = `ground_truth.exogenous_objective_v1` (System B, unchanged, independent) -> normalised regret, computed AFTER selection.
